

SEGULA Technologies strengthens its presence in Morocco with a new engineering office in Tangiers and strategic development in the energy sector

- *The engineering group SEGULA Technologies is opening a third design office in Morocco to get closer to its customers and strengthen its presence in the north of the country.*
- *Located in Tangiers, this office covers the automotive, aerospace, rail and energy sectors, with 40 employees currently in post and a target of 100 by the end of 2025.*
- *This strategic move underlines SEGULA's commitment to Morocco, where the Group has been helping to transform key industrial sectors for over 20 years, as well as training and developing the skills of Moroccan engineers.*

Present in Morocco for over 20 years, the engineering group SEGULA Technologies is continuing to expand in the Kingdom with the opening of a new design office in Tangiers.

A strategic site to support major industrial transitions

This strategic move to the north of the country, a major industrial hub, aims to strengthen the Group's proximity to its customers and support them in their transformation in various sectors:

- **Automotive and mobility:** by offering technological solutions to support the transition to electrification, the digitalisation of processes and the development of intelligent vehicles.

- **Aerospace:** by offering its expertise in engineering, tooling, production services, maintenance and manufacturing through its subsidiary SIMRA.
- **Energy and environment:** working on the development of renewable energies, the optimisation of industrial infrastructures and the integration of new energy solutions.
- **Rail:** modernising infrastructure and systems for more efficient, connected transport networks.

Located close to Tangiers TGV station, the office covers 500 square meters and already employs 40 people, with a target of 100 by the end of 2025.

Developing local talent: a strong commitment

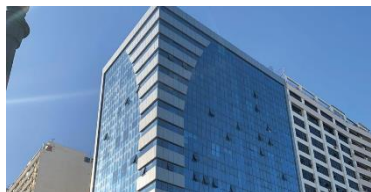

"The Tangiers region is rich in highly skilled human resources. By locating here, we know that we will be able to draw on a pool of qualified talent that we aim to develop and enhance. In particular, we have put in place an ambitious training and support program: intensive two-month training for young graduates, career paths to help them adapt to new technologies, etc. Thanks to this specific training, we can offer our customers cutting-edge expertise," explains **Abdelilah Farouk**, Senior Vice-President of the Mediterranean Region.

Growing strength in engineering

With more than 1,300 employees in Morocco and a twenty-year presence in the country, SEGULA Technologies is a key engineering player serving local and international industries. After Agadir and Casablanca, this new facility in Tangiers marks a further step in its commitment to innovation and sustainable development in Morocco

By 2025, the Group aims to be a major player in the energy sector, supporting its customers in their energy optimisation, electrification and smart infrastructure development projects to meet the challenges of efficiency and sustainability. This dynamic is perfectly in line with Morocco's energy objectives, which aim to achieve 52% renewable energy by 2030, reduce its energy consumption by 20% and cut its dependence on imports while reducing its CO2 emissions.

About SEGULA Technologies

SEGULA Technologies is a global engineering group serving the competitiveness of major industrial sectors: automotive, aerospace, energy, rail, naval, life sciences and telecommunications. With a presence in over 30 countries and 140 offices around the world, the Group is committed to building close relationships with its customers thanks to the skills of its 15,000 employees. A leading engineer who places innovation at the heart of its strategy, SEGULA Technologies carries out large-scale projects, from research to industrialisation and production.
